

PowerBook Duo 230 Disassembly

Easy steps to get to the heart of the PowerBook Duo 230

Written By: Apple World

TOOLS:

- Cacciavite Torx T8 (1)
-

Step 1 — Preparation

- Place the PowerBook Duo 230 on a clean table and prepare a Torx T8 screwdriver.

Step 2 — Battery

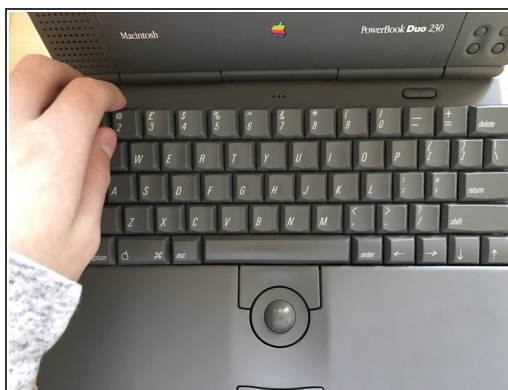

- Push in the button as far as it will go.
- Press and hold the button then simultaneously slide the battery cover to the left.
- For greater security, you can now remove the battery.

Step 3 — Torx Screws

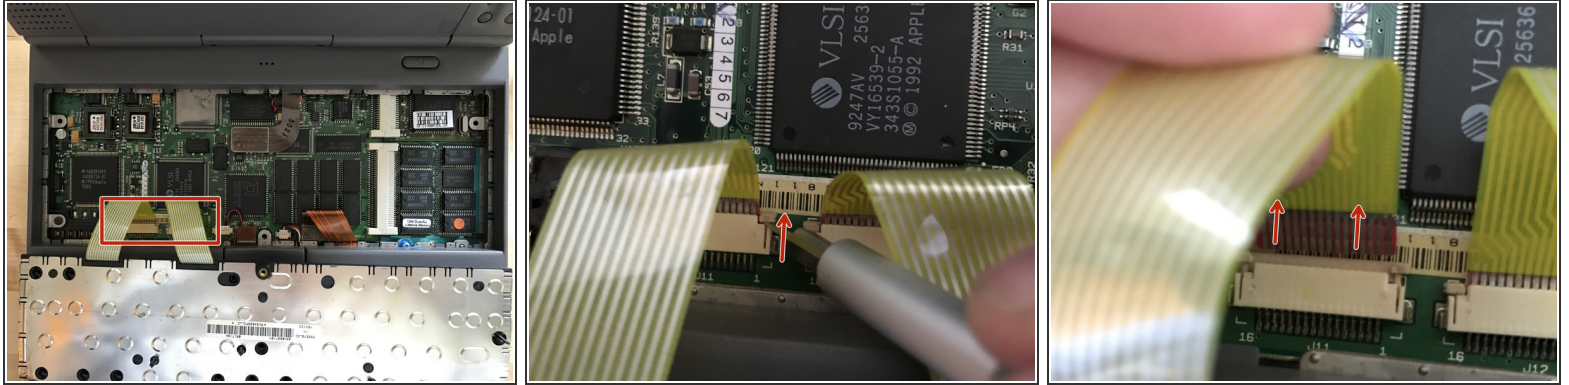

- Loosen the 2 Torx screws.
- The screws are the same.

Step 4 — Keyboard Removal

- Turn your PowerBook over and open it.
- Now you have to lift up the keyboard. **Lift the keyboard by the upper part.**

Step 5 — Keyboard Connector

- Disconnect the keyboard from the Logicboard.
- Now you need to move the small levers in every corner up. **Be careful, small parts can break easily!**
- Gently pull out the flex cable.

Follow the steps in reverse order to reassemble your device.
